RRP Yamaha SuperJet 1 Air Inlet Handle Pole Bracket ('96 & Up)

\$275.00

This CNC machined bracket uses 6061 T6 anodized aluminum. It is lower than stock which lowers the pivot point of the handle pole improving handling of the ski. Using a really wide mounting surface, 6 bolts and underplate will give a really good clamping on to the hull, also comes with beefy adjustable hood clips. This bracket is race legal in stock, limited and super stock class. NOTE: You will have to use lower hood with this bracket. Part: SP-BL-YAM included in kit, this part is to make your stock handle pole stiffer.
