RRP Kawasaki 2 Air Inlet Handle Pole Bracket

\$299.00

This CNC machined bracket is made using 6061 T6 anodized aluminum. It will allow you to install the dual air intake of 2 1/2 inches each. This bracket system will double your air intake resulting in more power. Less water will enter into you engine compartment due to the fact that it will let the air in at the highest point on the ski. It's stronger, lighter, and stiffer than the OEM stock and looks great. This bracket is race legal in mod class, free style and free ride.
