Kawasaki 800 SXR Head Kit w/Girdle

\$359.00

Newly released, TBM Racing in conjunction with Joey's Watercraft developed this simple yet effective head kit. Frustrated with constantly breaking domes on the "other" brands we were running we decided to build our own with our patent pending "Dome Saver" design. The head body and cap is constructed of 6061 aluminum, while the domes are machined from 7075, which is a much stronger material than 6061 due to its high cost. This head utilizes a three-piece design that has water flow control not possible with a one-piece head. No gaskets or messy silicone needed as it's completely sealed by o-rings. Our Universal Girdled Head Cap comes standard with this kit and will accommodate our Twin Pipes, or Factory Dry or Wet pipes. If using the Factory Dry Pipe you will need to purchase the Factory Dry Pipe Hardware Kit sold separately.

*** domes are not included**
